

SHARE Military Initiative at Shepherd Center

Shepherd Center
SHARE MILITARY INITIATIVE

What is the SHARE Military Initiative at Shepherd Center?

For military veterans, service members, and first responders who are ready to accept help and healing for their daily struggle with **traumatic brain injuries** and mental health concerns, SHARE is a comprehensive rehabilitation program that offers:

- Collaborative care
- Flexible programming options
- Transition support
- Community reintegration

What kind of care do clients receive at SHARE?

SHARE offers a dedicated, expert team that, depending on a client's unique treatment needs, includes specialized providers trained in:

- Neurology
- Physical and rehabilitation medicine
- Physical therapy
- Occupational therapy
- Speech-language pathology
- Recreation therapy
- Nursing
- Case management
- Vocational rehabilitation
- Community re-integration
- Neuropsychology, psychology, and counseling
- Chaplaincy

How long do clients receive care at SHARE Military Initiative?

We offer flexible programming options ranging from 4 to 14 weeks, customized to meet each client's unique needs. SHARE provides multiple options, including an intensive outpatient program, a modified outpatient program, single-service therapy, and virtual programming.

How much does SHARE cost?

SHARE is available at no cost to military veterans, service members, and first responders. If a client has medical insurance benefits, SHARE will use them for what they cover. We have generous donors who cover any remaining costs.

SHARE Military Initiative at Shepherd Center

How does SHARE help clients once they return home after graduating from SHARE?

Clients who graduate from SHARE's Comprehensive Day Program receive 12 months of follow-up sessions with a transition support specialist to help them return to their community and stay on their path to renewed purpose.

Who comes to SHARE?

Veterans, service members, and first responders who:

- Are ready to accept help and healing
- Have symptoms of mild to moderate traumatic brain injury (TBI) or concussion
- May have a co-occurring diagnosis of mental health concerns such as anxiety, depression, or post-traumatic stress
- Are medically, behaviorally, and psychologically stable to participate in an outpatient treatment setting
